WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

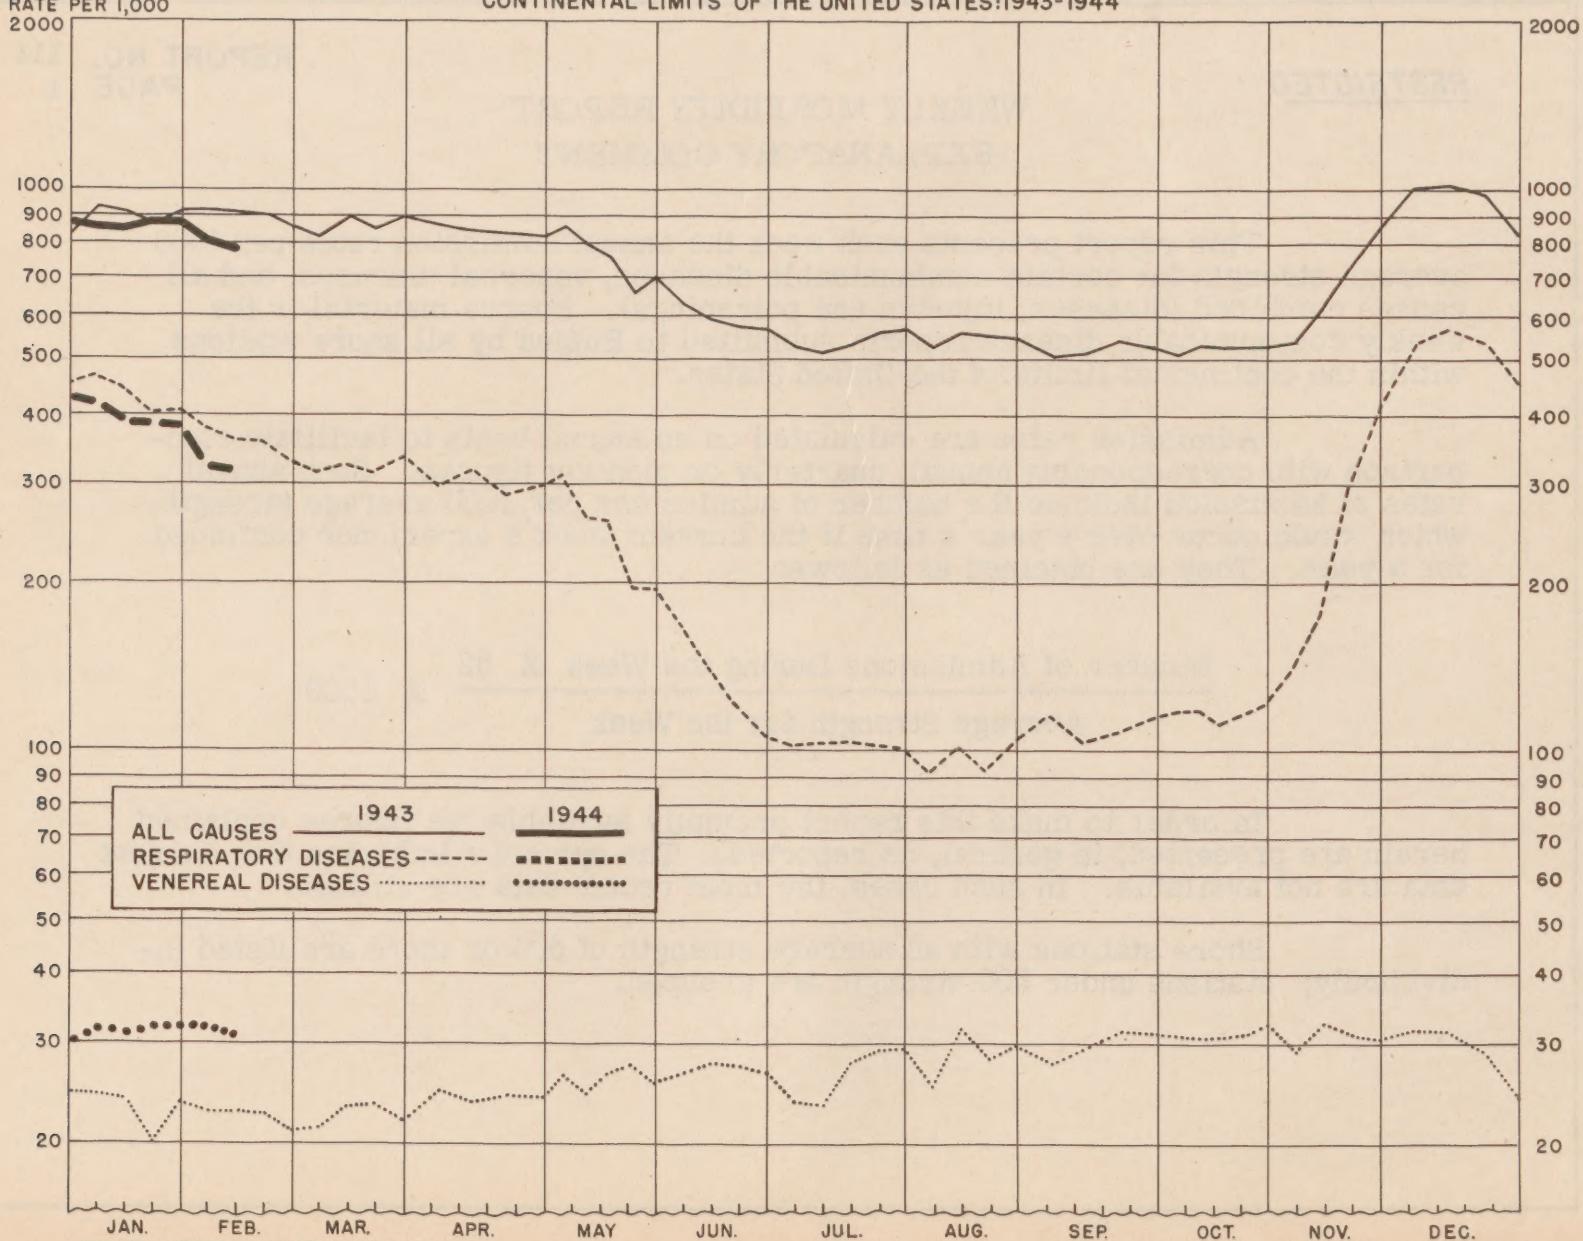

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

FIGURE 1

ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS  
FOR CERTAIN RESPIRATORY DISEASES\*, VENEREAL DISEASES, & ALL CAUSES,  
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 111  
PAGE 2

\* INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;  
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;  
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 111  
PAGE 3

CURRENT TRENDS

The trend of admissions for all causes continues downward and below the 1943 level. The respiratory disease curve lies below the 1943 curve and continues downward though not as sharply as last week. The venereal disease curve lies well above the 1943 curve for the 7th week standing at the approximate level of October and November 1943.

Influenza and Catarrhal Fever. The incidence for these infections continues to drop slowly and for the first week since the epidemic started (the 4th week in October 1943) every District in the continental U. S. shows a decrease. The rate for all Naval Districts stands at 223 which is well below that for the corresponding week of 1942 and of 1943. The 9th District shows the highest rate for the week, the 7th District the lowest.

Pneumonia--Broncho and Lobar. Though the trend for these infections is slightly downward since the peak in the week ending Dec. 11, the past 3 weeks have shown a leveling off process. The rate in the 13th District continues disturbingly high, 16. In this District, already seeded with streptococcus infections before the influenza became epidemic, a large proportion of the pneumonias occurring since the epidemic have apparently been streptococcic pneumonias. (Empyema has been a rather common complication in these streptococcic pneumonias.) The lowest rate for these infections was reported by the 6th District.

Pneumonia--Atypical. The rate for this infection continues around 4 which is well above the 1943 level for the corresponding week. The 11th District shows the highest rate; the 6th District and 13th District reported no cases.

Tonsillitis and Pharyngitis, Acute. The curve for these infections has been almost consistently but not sharply upward since the beginning of the year. The highest rate is reported this week in the 9th District, the lowest rates in the 3rd, 7th and 12th Districts.

Rheumatic Fever, Acute. The rheumatic fever rate continues to rise, the rate for the current week being 6. The incidence of the disease varies widely in the different Districts. The highest rate, 22, is reported for the 13th District; the next highest, 11, by the 9th District. None is reported in the 7th District and only 1 in the 6th District.

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 111  
PAGE 4

CURRENT TRENDS - CONTD

Scarlet Fever. The incidence of this infection though slightly falling the past 3 weeks is still high and well above the 1942 and 1943 incidence for the corresponding week. The highest rate, 51, is reported for the 13th District and the next highest, 39, for the 9th District. The 7th District reports none. The rate in the 13th District is only about one-third that reported in the week ending Jan. 1.

Cerebrospinal Fever, Meningococcic. The rate for this infection continues low and well below the 1943 rate for the corresponding (7th) week. The following report no cases for the week: 4th, 7th, 12th, 13th Districts and the Potomac River and Severn River Commands. The 3rd and 9th Districts report a rate of 2.

Malaria. The malaria rate continues to fall. The rate of 3 is above the rate for the corresponding weeks of 1942 and 1943 but well below the peak rate of August, 1943. The highest rate, 9, is reported for the 11th District. The 4th District reports none.

Measles. The measles rate continues high but the curve has flattened off for two successive weeks. The rate of 18 is less than the rate for the 7th week of 1943 but greater than the rate for the 7th week of 1942. The highest rate (45) is reported for the 13th District and the next highest, 35, for the 9th District. The lowest rate, 3, is reported for the 3rd District.
